I have gone through the manuscript entitled **MCDA - Groundwater prediction analysis for Sustainable Development using GIS Supported AHP in Okeigbo, Southwestern Nigeria**. This is an interesting study and authors have collected unique dataset. The paper is well written and structured. However, in my opinion there are some shortcomings such as:

1. In the figure 1 and 2 latitude and longitude values are different than the text.
2. Study area and Geological map is showing variations so it should be concise.
3. In the field photograph use proper scale or add scale into each photo.
4. There is also some research gap so add some references for fillings the gap.

**Based on my opinion authors need to have do minor corrections/ revisions before the final publication**
