

Review of: "Evaluation of Antioxidant Activity and α -Amylase Inhibitory Potential of *Melilotus indicus* Ethanolic Extract: An In Vitro and In Silico Study"

Gideon Ayeni

Potential competing interests: No potential competing interests to declare.

2.1, should be plant collection and authentication

2.4.1, DPPH should be written in full on the heading.

DPPH assessment alone can't justify the antioxidant activity of the extract.

Other in vitro assays such as hydroxyl radical or superoxide anion radical could compliment.

Better still the ferric reducing power assay (FRAP) could be investigated with a bid of attesting the antioxidant activity.
