Potential competing interests: No potential competing interests to declare.

We need more research on ecosystem services from site specific studies to get more understanding and gain more knowledge based on different type of ES. This article provide a great example of ES study with specific focus on agroextractivism in Salamina. I am interested to get further explanation on figure 1 (a mixed framework of ES) in the paper discussion. Here some questions that may be further examined:

1. How are the avocado and coffee plantation agriculture practices regulate ES in the study area? In this case on ecological resilience to droughts and floods.
2. Any provisioning benefit of those agricultural practices to ES? Such as provide a sustainable source of wood products, and non-timber forest products, which can support local economies and reduce the pressure on natural forests.
3. Any cultural benefits of those agricultural practices to ES? Such as serve as educational and recreational spaces, promoting environmental awareness and providing areas for leisure and outdoor activities.

Should you add above analytical works to this paper, it will add more knowledge to wider readers in the world. Thank you and and all the best!
