

# Review of: "Design and Realization of a Low-Cost Smart Walking Aid for Visually Impaired and Blind People"

Thomas Andzi Quainoo Tawiah

Potential competing interests: No potential competing interests to declare.

The paper presents the design, realization, and evaluation of a low-cost walking aid for visually impaired and blind people. I have the following comments to make:

More elaborate evaluation is required in order to address the following issues?

Was the evaluation done in the lab or in real world scenario?

Was noisy and cluttered environment with multiple objects present covered?

Was any end users involve in the evaluation?

What are some of the challenges in using this device?

Recommendation for any future work required to improve its reliability?
