Potential competing interests: No potential competing interests to declare.

The abstract did not explain the issue regarding workers who resigned because they were forced to wear masks and the conclusions from the study results was not stated.

I found it is difficult to understand some phrase of the article and some are not suitable. Such as the use of "him", "itself", or "her" to describe the type of worker.

The benefit of accomplished five tasks did not discussed comprehensively.

Then, the phrase of "Coasian bargaining" is not used in general public, it will help if there is an explanation about this phrase.
