Potential competing interests: No potential competing interests to declare.

The original article covers a potentially interesting and emerging topic related to PAMP immunotherapy. I regard the main point of this paper as highly attractive, and the results are clearly presented. The text does not contain any major errors; therefore, I have some minor comments and recommendations:

1. There is a need to provide a slightly more expanded introduction, shortly mentioning/describing the pathogenesis of COVID-19 and its impact on modern healthcare.
2. The figure summarizing and clarifying the results should be added.
3. The following references should be added and properly cited within the main text:

- [10.5603/OCP.2022.0022](#)
4. In some places, the use of English could be improved.

Completing these gaps will have an impact on the understanding of the aim of the study and, from my point of view, is absolutely necessary.
