Potential competing interests: No potential competing interests to declare.

The abstract is concise and well-written, effectively conveying the key points. However, adding a sentence to bridge the historical context to the investigation's significance could enhance the flow. Consider including a sentence summarizing the practical implications or potential improvements in search strategies resulting from a Bayesian approach.

The investigation's scope, specifically in rural settings in the UK, is clearly defined. This helps readers understand the context and limitations of the study. However, it would be beneficial to briefly discuss the broader applicability of the findings.

In summary, the paper provides a clear overview of the research focus, methodology, and potential implications. A few minor adjustments could further enhance its coherence and impact.
