Dear authors,

Despite the positive features of the study, there are some considerations to take care of before the paper is published.

The following comments will summarize my appreciation and major concerns with your paper. I hope these comments help you further improve your study.

Introduction:

1. The introduction is confusing and longer. It would be useful that the authors to summarize the introduction and make a better connection between constructs.
2. Specify the main aims of the study and the main contributions to the literature.

Theoretical background

1. What are the main goals of the paper? What do you want to achieve? And what do you add to the literature?
2. What theory may support your goals?

Method

1. Please add more information regarding the data collection procedure. How did the participants were recruited? Was there any inclusion or exclusion criterion?
2. In the measures section please:
3. Please develop the data analysis procedure.
4. In the results it should be important to have more information.

Discussion

The discussion was short and did little more than summarise your findings.

1. Please, develop the discussion section, considering the theoretical implications.
2. The limitations and future research should be elaborated.

3. What are the main practical implications of the study? And what do you add that is not tested before?
