Potential competing interests: No potential competing interests to declare.

1. English grammar and typos
2. Sample size is too small
3. Seasonal variation not taken into considerations
4. Figures and tables of descriptive and analyzed results cannot accessed
5. The authors could revise the discussion section to talk the implication of correlation among various parameters. that is, the possible source of the physiochemical parameters in these waters and what that mean in water quality management. Just as they did for lead (Pb)
