

Review of: "Synthesis of 1, 2-Disubstituted Benzimidazoles at Ambient Temperature Catalyzed by 1-Methylimidazolium Tetrafluoroborate ([Hmim] BF₄) and Investigating Their Anti-ovarian Cancer Properties Through Molecular Docking Studies and Calculations"

Usha Jinendra

Potential competing interests: No potential competing interests to declare.

While the experimental procedure is outlined, more specific details on reaction conditions (such as reaction time, temperature, etc.) could enhance reproducibility. Some tables and figures could be better organized for clarity, particularly in presenting the results of molecular docking calculations. It would be beneficial to include a discussion of any limitations or challenges encountered during the study, which could provide insights for future research directions.
