Potential competing interests: The author(s) declared that no potential competing interests exist.

In this research work, Edoardo Marovino (Author) and its co-workers reviewed on the "Methadone In Chronic Non-Oncological Pain: From Disassuefaction Of Painkillers Abuse To The Primary Management Of Opioid Hyperalgesia". Methadone is an atypical opioid, with pharmacological characteristics that make it very useful not only for detoxifying heroin addicts but also for treating patients with chronic pain and concomitant opioid hyperalgesia and the development of tolerance associated with a now intractable background pain. Methadone showed side effect like Upset stomach or vomiting, Slow breathing, Itchy skin, Heavy sweating, Trouble breathing, Fainting or lightheadedness, Hives or a rash, Swollen lips, tongue, throat, or face, Chest pain or a rapid heartbeat, Hallucinations or confusion, Seizures, A hoarse voice, Trouble swallowing, Severe drowsiness and Unusual menstrual periods which should also be dictated into manuscript. Manuscript should be accepted after revision.

Comments

- The title of this manuscript should be modified to make it more meaningful.
- Abstract part should be revised.
- Introduction part should be improved.
- Provides the on what age group this can be given and what formulation will be best to reduce side effect.
- Would recommend that the manuscript should be checked completely for grammatical and typographical errors.
- Provides the abbreviation list of the short form at the end of the manuscript
