# Esophageal Granular Cell Tumor

National Cancer Institute

## Source

National Cancer Institute. *Esophageal Granular Cell Tumor*. NCI Thesaurus. Code C5700.

A tumor that usually presents with small nodules or small sessile polyps, predominantly in the distal esophagus. Histologically, it is composed of sheets of oval to polygonal cells with a small central nucleus and abundant granular cytoplasm. This is usually a benign tumor. (WHO, 2000) -- 2003
