Patterns of social dynamics surrounding suicide notes on Facebook platforms: A netnographic approach

-The topic of health within social networks is important.

In this study, ethical questions arise regarding the issues of suicide and methodology.

-The links between the netnographic approach and psychiatry or psychopathology must be clarified. Why would this approach be more suitable for addressing the problem of suicide?

-As it is not possible to observe or record people without their knowledge, it is important to know concretely how consent is implemented in this context.

-The type of observation and the case study must be clearly defined in the methodology section.
