# CFC1 wt Allele

National Cancer Institute

## Source

National Cancer Institute. *CFC1 wt Allele*. NCI Thesaurus. Code C51419.

Human CFC1 wild-type allele is located in the vicinity of 2q21.1 and is approximately 7 kb in length. This allele, which encodes cryptic protein, plays a role in intercellular signaling pathways during vertebrate embryogenesis and cellular growth. Mutations in the gene produce variant alleles that result in autosomal visceral heterotaxy.
