

Review of: "[Case Report] Prednisolone Induced Gingival Enlargement: A Rare Case Report"

Priyanka Paul Madhu

Potential competing interests: No potential competing interests to declare.

The overall work is very satisfactory.

Comprehensive Data Presentation: The content is clearly organized, making it easy to follow the comparative analysis. The article ensures clarity and prevents data from being conflated.

Discussion Section: The discussion section could be expanded to include a more detailed interpretation of the results. Specifically, the clinical implications of the observed changes and how they compare with existing literature should be addressed.

Participant Details: Providing more information about the participants, such as demographic data and any relevant clinical background, would enhance the context and understanding of the study.

Recommendations

Address Missing Data: Include a brief discussion on the impact of any missing data points and how they were handled statistically. This will provide a more complete picture of the study's rigor.

Expand Discussion: Elaborate on the discussion section to interpret the results in the context of existing research and clinical practice. This will help in understanding the broader implications of the findings.

Participant Information: Add demographic and clinical background information about the participants to give readers a better understanding of the study population.

Future Directions: Suggest potential future research directions based on the findings of this study. This can help in advancing the field and providing a basis for further investigations.

With minor revisions and additional details, it can provide even more impactful insights into the field. The methodological rigor and clear presentation of data are commendable, and the study contributes valuable knowledge to clinical practice and research.
