Potential competing interests: No potential competing interests to declare.

- 1- The abstract is poorly written and has some issues in terms of grammar and punctuation.
- 2- The Introduction section is too long; it is supposed to be shorter.
- 3- The benchmarking in this manuscript was not sufficient.
- 4- There are not sufficient details about the dataset used. This leads to having an approach without results that can be visually seen by readers.
- 5- The authors are supposed to work more on the presentation of the proposed approach and the discussion of the results.
