Potential competing interests: The author(s) declared that no potential competing interests exist.

- In the *Sample and Recruitment* section the authors did not explain how the quota sampling was made.
- In this section too, it lacks information about population profile for weighting.
- In the *Measures* section the use of nicotine products lacked of explanation of the used variables.
- In the *Results* section, the margin of error for both samples was not given.
- Concerning about the results, it appears that a social grading system was not explained in methods section.
- In the *Table 1*, the authors write 'in another way' at sex, not explaining what is this at methods section.
