Lobar holoprosencephaly

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Lobar holoprosencephaly. ORPHA:93924

Lobar holoprosencephaly is the mildest classical form of holoprosencephaly (HPE; see this term) characterized by separation of the right and left cerebral hemispheres and lateral ventricles with some continuity across the frontal neocortex, especially rostrally and ventrally.
