

Review of: "Numerical Study of Thermal Performance on Fin and Tube Heat Exchanger with Flat Rectangular and Sinusoidal Winglet Vortex Generators"

Bijan Kumar Mandal

Potential competing interests: No potential competing interests to declare.

1. The article requires a thorough examination for grammatical inaccuracies. While the abstract discusses temperature distribution, this aspect is absent from the Results section.
2. The absence of validation using previously available experimental and numerical data from the literature raises concerns regarding the credibility of the study.
3. It is imperative to substantiate the validity and dependability of this research by comparing its findings with those of prior studies. An analysis of figures 6(a), 6(b), and 7 is warranted, accompanied by explanations for their inclusion.
4. Additionally, it is essential to highlight the novelty of this research.
5. Validating the results through comparison with experimental references is recommended.
