**Title** - System and Method for One or More Extruders Using Robotic Arms to Print a 3D Model

The paper presents a detailed analysis of a novel approach to 3D printing, focusing on the development of a system utilizing robotic arms and extruders.

### **Here are my comments:**

1. While the paper presents a solid theoretical framework, it lacks empirical evidence or experimental results to validate the proposed system's effectiveness.
2. The description of the control unit and software development could be more detailed to provide readers with a better understanding of these critical components.
3. The paper would benefit from more in-depth discussions on the practical challenges and feasibility of implementing the proposed system in real-world settings.
