**Potential competing interests:** No potential competing interests to declare.

The scope of the paper is relevant for contemporary studies. However, the introduction section lacks clear linkage by linking the background issues to problem statement with more many thing just as preparing lecture notes. Moreover, there was serious issues with regards to the methodology both in terms of material and methods and statistical problems. The use of paired T test inappropriately used.

The paper can be published with major correction in terms of language and methodological issues
