Potential competing interests: No potential competing interests to declare.

The manuscript entitled "*Insights into the development of zymography from inception to current day - a discussion on innovations, challenges and solutions*" offers a comprehensive examination of the utility of zymography. The paper encompasses a broad spectrum of topics, including the significance of zymography approach, recent developments as well as the opportunities, challenges and solutions. Given the manuscript's overall commendable quality, I endorse its publication with only minor revisions aimed at enhancing clarity:

1. An informative table can be added in the manuscript.
2. It would be nice to provide more references (especially recently published)
3. The title of the last section can be changed as "Conclusions and future perspective" and the section can be expanded more considering the future perspective.

These suggested revisions are minor in nature, and their incorporation is expected to further elevate the manuscript's quality. Upon the implementation of these modifications, I wholeheartedly recommend the paper for acceptance and publication.
