

# Review of: "Tourists' Activities and their Impacts on Chinhoyi Caves Heritage Site, Zimbabwe"

Bruno Daniel Lenhare

**Potential competing interests:** No potential competing interests to declare.

The paper presents a critical analysis of the impacts of tourism on the Chinhoyi Caves Heritage Site, located in Zimbabwe. Based on various sources from authors and previous works, it details the possible positive and negative effects that this tourism activity can have on the cave.

However, an issue that deserves attention is the absence of figures illustrating the cave's location in relation to the country, as well as the lack of photographs demonstrating the mentioned impacts. The inclusion of these visual elements would contribute to a better understanding of the text, making it clearer and more appealing to readers.

Furthermore, some sentences in the text lack a more formal wording, consistent with the standards required in scientific articles. It is important to make adjustments to ensure coherence and maintain the expected technical language in this type of publication.

In this context, the importance of this study is emphasized, as the preservation of the Chinhoyi Caves Heritage Site is crucial for conserving Zimbabwe's natural and cultural heritage while seeking sustainable tourism development in the region. By including relevant figures and photographs, as well as enhancing the formality of the sentences, the text can gain greater scientific relevance, providing valuable insights for the preservation of this significant historical and natural heritage.
