

Review of: "Women education in Ethiopia"

Pallavi Kanungo

Potential competing interests: No potential competing interests to declare.

1. The topic is good but the authors need to improve on some areas.
2. Few statements are not clear and precise and has grammatical errors.
3. Introduction looks redundant but it can be improved. Literatures are not enough and in fact it is outdated.
4. Descriptive statistics only shows what is there in the figure and not any critical insights from the author's side.
5. why an ordinal logistic regression?? any justification.
6. Authors can also provide their recommendations to mitigate illiteracy in Ethiopia.
7. Major revision required to the paper but the study on education has a great potential when it comes to developing or developed countries.
