Potential competing interests: No potential competing interests to declare.

The title of the paper is interesting and suggested that the study investigated the adoption and use of emerging technologies in an academic context among Moroccan nursing students, using the UTAUT as a basis. However, the abstract do not highlight the motivation or problem which leads to this investigation. The method need to be clarified and it is expected that the results are related to the adoption of UTAUT.

I listed here questions based on the sections:

Background study

What are the emerging technologies considered in this study? How does the technology relate to the nursing students during the Covid19 period? Why is it important to investigate the adoption of the emerging technologies using UTAUT? What acedemic context was investigated?

Literature Review and Hypothesis Development

The hypotheses need to be provided and supported by the literature review.

Methodology

The sampling and data collection method requires more elaboration. Include the data collection period and how the respondents were recruited. Is there any pilot survey conducted earlier? What are the items supporting each UTAUT construct? How was the collected data prepared and analysed? Did you conduct any mediation analysis?

Results

The results can be further improved by performing descriptive analysis, hypothesis testing and EFA. Use of any statistical software will need to be mentioned.

Conclusion

It is not clear how the result of this investigation will help policy makers.
