Potential competing interests: No potential competing interests to declare.

The authors should address the concerns listed below to improve their paper:

The work contains little research. The work seems purely development-based.

I say this because of the following major concerns:

Concern 1:

The authors should put their work in the context of the existing research works.

To do so, any research work should start with reviewing the existing proposed solutions.

Such review must emphasize the limitations of the existing solutions, and thus provide motivations for the present research work.

The present paper does not have any review of the existing research literature.

The authors should revise the paper to include a section dedicated to existing related works

Concern 2:

The authors should compare their solutions against well-known existing solution(s) in the field.

Concern 3:

The proposed algorithms are not based on known methodologies.

For instance, are the algorithms based on polling the inputs or on interrupts?

Please explain the operations of the algorithms to improve readability and understanding.

Please analyze the computation/storage/communication/energy requirements.
