Potential competing interests: No potential competing interests to declare.

The paper covers a wide range of topics related to AI - and particularly ChatGPT - development and raises several interesting points. However, it lacks a clear and concise focus, making it difficult to determine the main argument of the piece. The author jumps from topic to topic without fully developing each point, which can be confusing for readers. Additionally, some of the language used in the abstract is unclear, and does not seem to have follow the formal requirements of scientific papers which may hinder comprehension. The approach taken by the author is also not systematic, which can make it hard to understand the overall argument being made. And anthropomorphization of ChatGPT should be avoided in scientific papers.

In summary, while the abstract raises some interesting points related to AI development, it could benefit from more clarity and focus in its presentation.
