Potential competing interests: No potential competing interests to declare.

The paper's style is imprecise and unclear, making it challenging for readers to completely comprehend the significance and breadth of the research. In its current form, the paper falls short of providing a comprehensive overview of the research; instead, it should concisely communicate the goals, methodology, and major conclusions of the study.

Furthermore, it appears that the study's methodology lacked both rigor and detail. Although the application of emotional coloring analysis and machine learning is encouraging, concerns arise regarding the validity and trustworthiness of the results due to the lack of openness surrounding the precise methods and datasets utilized. Moreover, the research loses credibility if potential biases and limitations in the technique are not thoroughly discussed.
