

# Review of: "There is high prevalence of overnutrition among married and cohabiting women in Nigeria: Findings from the 2018 Nigeria Demographic and Health Survey"

Monalisha Chakraborty

Potential competing interests: No potential competing interests to declare.

The manuscript needs a thorough revision

1. The grammatical quality of the article must be significantly improved.
2. The introduction section must be followed by research problems and research questions which is not clearly explained.  
The authors should re-write that part. Moreover, valuable addition to the reviewed literature is also needed.
3. Page 2 line 6: Sentence should not start with 'and'.
4. Page 3: (<https://dhsprogram.com/pubs/pdf/FR359/FR359.pdf>) The authors can cite this and keep it in the reference section.
5. Authors should be careful while putting commas, full stop and capital letters in the text.
6. Section 3.3.3 Model 3: 1.051). The sentence 'Christianity was associated significantly with overweight across the three models with AOR of 1.46, 1.37, and 1.26, respectively' should be modified. It can be 'Christian women are more likely to be underweight'.
