

Review of: "Grid-secluded Induction Generator with ANN and Intreval Type-2 Fuzzy based Controller for Wind Power Generation with Smart Load Control"

Soumyajit Ghosh

Potential competing interests: No potential competing interests to declare.

he authors have studied an isolated induction generator based wind generation system with an ANN and IT2F intelligent MPPT control. The interesting thing in this paper is the MPPT strategy and the smart load control which can isolate loads with incipient faults.

There are some suggestions. 1. A study can be developed with newer methods of deep learning such as CNN.

2. Conventional control comparison may also be added.

3. More results can be added.
