The author did a narrative review to analyse the effectiveness of Bivalent COVID-19 booster doses. The methodology is proper, the methods section is detailed, the results supported the conclusion. Overall, the paper is suitable for publication.

However, I just have some remarks.

1. The abstract: the objective has to be placed after the background (the third sentence).
2. The Prisma flow diagram is a result that should be placed in the results section, after the first sentence.
3. There are some mistakes, for example: page 4, paragraph 3: severe is repeated (the risk of severe severe form of COVID-19), page 7, at the end of paragraph 1: was estimated as (not the as), page 7, results section paragraph 3: previously (not previously).
