Potential competing interests: No potential competing interests to declare.

Firstly, I would like to appreciate the author for his efforts to collect and compare the information in his intended overview.

However, some points must be taken into consideration from his side for better perception and these can be summarized as per below :

- it might be helpful to compare the covid in abstract to other conditions that might be thought to be comparable and For better and prompt understanding the common in between and the differences of the above mentioned disease , tables are required .

- There are numerous serious grammatical mistakes in the writing and presentation overall, and the work has to be heavily modified in order to improve.
