Review of: "Science in Light of the Analogy of Being"

Piero Chiarelli[1]

1. Italian National Research Council, Rome, Italy

The paper presents an interesting perspective on the topic, which has already been addressed in much greater depth in the existing scientific literature. The conclusions are generally consistent with advanced positions in the field.

However, the manuscript remains rather superficial in its current form. It would benefit from a more comprehensive treatment of the subject, particularly through the integration of more recent results in the Introduction (see DOI: 10.20944/preprints202512.0522.v1 and DOI: 10.20944/preprints202512.0504.v1).

Furthermore, the analysis requires substantial revision to align it with these already established findings and to ensure that the discussion adequately reflects the current state of the art.
