Review of: "Large Vision-Language Model Alignment and Misalignment: A Survey Through the Lens of Explainability"

Kuo Shi¹

1. University of Technology Sydney, Australia

Comments:

1. While the paper discusses misalignment, it does not review existing evaluation metrics for measuring alignment and misalignment.
2. The paper does not discuss how alignment challenges scale with model size. For instance, do larger LVLs (e.g., GPT-4V, Gemini, LLaVA-2) naturally improve alignment, or do scaling laws exacerbate misalignment?
