

Review of: "Quantum Jump" and Their Effects on the Photo Whitening Technique"

Umakanta Tripathy

Potential competing interests: No potential competing interests to declare.

The proposed technique is very interesting for tooth whitening. However, the authors need to improve their manuscript by working on the following comments:

The number and unit should have a space in between.

1400 mW power at 408 nm looks very high. Please verify.

How did they get 165 mW/cm^2 from 1400 mW?

Rewrite Materials and Methods. It is not clear.

No results have been shown either in the form of imaging or as statistical data. Hence, it is difficult to believe the claim.
