Potential competing interests: No potential competing interests to declare.

The article presents an efficient strategy for the reduction of non-revenue water in Egypt, as an action plan for the reuse of this water resource as a livelihood method. However, it is necessary for the description and analysis of the methodology to be written either in paragraphs or explained with graphics where it is evident what is wanted to be done in the project and not with ideas that make the understanding of the methodology of the project difficult. Otherwise, a good job.
