**Potential competing interests:** No potential competing interests to declare.

1. There are some writing errors and grammar problems in the manuscript as follows:

(1) In abstract, "with 5÷30 mass parts" ;

(2) In II. Methodology,

a. "3200-3600 cm<sup>-1</sup> absorption fields are observed;

b. 1100, and m<sup>-1</sup> absorption areas are strengthened;

c. Weakening of the 720 cm<sup>-1</sup> absorption area. The disappearance of the SREPT absorption area indicates the loss of (including) end groups in SREPT.

"leads to the improvement of the physical and mechanical properties of the compositions."

2. Fig.1 and Fig.3 were not clear, especially the axes were very not standard. So they should be replotted.

3. Table 1 was very disorder, so it should be reset.

4. III. Results and discussion, the writing should be improved.

5. The conclusions should be improved.
