Review of: "Enhancing Science Education with Learning Management System for Effective Learning Outcomes"

Nevien H. Elkhaial[1]

1 Alexandria University

Enhancing Science Education with Learning Management System for Effective Learning Outcomes.

Issues to Address

1. Abstract:

The abstract needs to determine the methodology and study recommendation related. It seems to be like a review of literature. It needs more academic language to be used.

2. Introduction:

The study was introduced well and appropriately. However, it does not provide strong or fresh arguments to convince the reader of the need for this research beyond what we already know about the benefits of LMS.

3. The research questions:

The research needs to determine specific questions to be answered.

4. Literature Review:

The author does a good initial job of reviewing research on LMS. At the same time, he could strengthen his literature review in a few ways. The author could discuss some of the relative strengths and weaknesses of the previous empirical studies, identify key shortcomings in the research base, and explain how his study is designed to address these shortcomings. For example, what are some contributions of prior research?

5. Methodology:

The author doesn't present any original empirical evidence or case studies to support the recommendations.
