I am very grateful for the efforts of the dear writers.

This article provides a valuable window to manage and better understand the effective processes in ER stress and biological mechanisms in cancer.

I suggest that the respected authors:

- 1- Add explanations regarding the process of autophagy and its connection with the main topic of the research.
- 2- In my opinion, there is a need to provide more explanations regarding the ER stress mechanism.
- 3- There is a need to present the necessity of conducting the research and the overall goal more clearly at the end of the main text.
- 4- It is necessary to strengthen the background of the research in the main text and refer to the results of previous studies in order to show the research gap better.

Yours sincerely
