Potential competing interests: No potential competing interests to declare.

In general: Every quote needs to be supported by a citation or references.

Title: Kindly adapt it to the factors that were researched.

Methods: This research analyzes anemia, but the data taken is from malaria patients. Please explain what the relationship is between anemia and malaria in this study. If the patient used as a sample is a malaria patient with anemia, perhaps the research title needs to be adjusted to the variable being studied.

Results: What's shown in the table shouldn't be explained in the narrative.

Table 3.2: It is best to modify the variables related to malaria and anemia in accordance with the goals of the study.

Would you like to investigate the connection between malaria and anemia risk?

Table 3.3: The prevalence of anemia, not anemia, should be the variable.

Discussion: Please explain the relationship between all the variables studied.
