Nice article

Clarity of the Problem Statement: The background effectively highlights the challenge of identifying unknown biological hypotheses in oncology. However, it could benefit from a clearer connection between the need for combinatorial analysis and the limitations of current approaches.

Novelty and Impact: The results mention that the engine confirmed known results and revealed unexplored genetic factor combinations. Expanding on how this tool differs from existing computational approaches in oncology would strengthen the impact.

Pedagogical Walkthrough: The conclusion states that the article explains an R-based machine learning search engine. It would be helpful to clarify if this walkthrough is for replication, modification, or direct application by researchers.

Declarations

Potential competing interests: No potential competing interests to declare.
