Potential competing interests: No potential competing interests to declare.

The main objective of this study is to present HA coating techniques for Ti Dental Implants- an overview. The presentation of manuscript used by the author adequately characterize the different techniques. "However there are several issues that are necessary to be explained:

1. The number of papers which are refereed are very few.
2. It is suggested to write the review paper in the Table form than explain the contents. For example: In this manuscript author should compare the different techniques in table form and than explain their pros and cons.
3. Comparison of results of any one of the studies are missing.
4. Conclusion is missing.
5. Lot of figures are missing.
6. In the text there are a large number of small errors that complicate its perception. There are also a few grammar errors. A thorough check for grammatical errors
