Autologous Ovarian Cancer Immunogene-modified T Lymphocytes

National Cancer Institute

Source

National Cancer Institute. *Autologous Ovarian Cancer Immunogene-modified T Lymphocytes*. NCI Thesaurus. Code C150696.

A preparation of autologous immunogene modified T-lymphocytes (IgT) that have been genetically engineered to be specifically reactive to ovarian cancer (OC) cells, with potential antineoplastic and immunostimulating activities. Upon administration of the autologous OC-IgT cells, the T-cells recognize and induce specific toxicity in the OC cells.
