Potential competing interests: No potential competing interests to declare.

Article title "Paulian Approach to Critical Thinking: Assessing an Intervention Program"**Strengths:** Critical thinking is an important twenty-first century skill that must be improved in both teachers and learners. Using the mixed methods is a great effort to support the results in more than one way.

I advise the researcher: Clarify what the research sample looks like and clarify the objectives and foundations of the program. used the same results can be reached using the Quasi-experimental method only, so I advise the researcher to present the results in more detail, to justify the use of the mixed approach, which requires great effort from the researcher.
