Potential competing interests: No potential competing interests to declare.

In this work, the authors address a very interesting and relevant topic, bringing to light a new context and parameters that are still little evidenced about a public health problem that affects the entire world.

Consider a list of abbreviations for the article.

At 1.1. Pay attention to the order in which references are inserted, always respecting the order from oldest to newest.

Consider the possibility for some models explained in 1.1 to present a flowchart to aid understanding. Or summarize the models in a flowchart.

At 1.3. Pay attention to the order in which references are inserted, always respecting the order from oldest to newest.

Verbal tense in objectives and methods

Figure 4, is it worth entering the R value?

In the conclusions, it would be interesting to consider looking further at the objectives of the article for elaboration, referencing the developed model itself.
