

Review of: "Inadequacies of Sommerfeld's Front Velocity Definition"

Muhammad Amer Latif¹

Potential competing interests: No potential competing interests to declare.

The manuscript deals with the front velocity of a signal as the limit of the phase velocity for infinitely high frequency. The manuscript has been clearly written, but the results are not novel. The manuscript cannot attract a broad number of readers.

I suggest the author add more relevant references, and a conclusion section must be added.

1. Introduction of the manuscript must be expanded with some more background of the topics.
2. The font in the "Abstract" should not be bold.
3. The front velocity of a signal and the phase velocity, etc., must be given in the manuscript.
4. In (30), the letter "E" is not clearly visible.
- 5.

Sincerely,

Reviewer
