**Potential competing interests:** The author(s) declared that no potential competing interests exist.

This manuscript proposed an evaluation method with recalculated weight method and PROMETHEE. This is an interesting study, and the author gave a detailed introduction to the application process of this method. There are a few comments should be considered to improve the quality of the research.

1. The manuscript has many format problems. For example, the format of References Section, the unification of data and units in tables, the calibration of numerical values in figures, etc.
2. The introduction of formula variables is too brief and inconvenient for readers to understand.
3. The Conclusion Section is not clear enough. The Conclusion needs to be divided into a separate section, and the innovation and application value of this method need to be more clearly explained.
