

Review of: "Biofuels and nanocatalysts: A Data Mining study"

Shashikant Auti

Potential competing interests: The author(s) declared that no potential competing interests exist.

Article is structured well. review is exhaustive.

I strongly appreciate the work titled "Biofuels and Nano catalysts: A Data mining study". The purpose of the article is fulfilled up to great extent."

I have few suggestions regarding the review work.

Keyword mentioned can be limited to specific at not generalized ones like "Production" and "Oil". Suggested to limit it to specific related to review work.

VOS clustering map is prepared very well.

In conclusion "data manipulation" word is used, suggested to reconsider use of word manipulation, data handling or data processing will fit in better way.

I recommend this manuscript can be considered for publication.
