Hello Slawomir.

I really enjoyed reading through your paper. It is very engaging, and I applaud you for the time and effort you have put into this.

Here are a few takes:

1. In line 3 of the abstract section, change exploit to explore.
2. For the objective section, fix number 5.
3. Within the text, change Fig 1, 2, and 3 by writing in full as Figure 1...and so on.
4. Explain Figure 2 in detail, interpret the graph correctly, and explain the relationship of the values to the stages on the graph.
5. Provide some evidence on previous therapies, including effect sizes, P-values, and confidence intervals, and how they compare with your findings.
6. In the section with challenges and solutions, it is best to state one challenge followed by the solution, which can be separated by paragraphs and so on.

I hope these few points help. Thank you, and have a good one!
