Potential competing interests: No potential competing interests to declare.

- Is there a clear overview of the global impact and urgency of the COVID-19 pandemic?
- Could there be more emphasis on the need for alternative diagnostic and screening methods due to the shortage of RT-PCR testing kits?
- Is the significance of Reverse Transcription Polymerase Chain Reaction (RT-PCR) testing and its limitations effectively communicated?
- Can there be further explanation of why clinical imaging, particularly chest CT, is being explored as a diagnostic tool for COVID-19?
- Are the benefits and challenges of using chest CT scans for COVID-19 diagnosis discussed comprehensively?
- Can there be insights into the evolving understanding of the role of chest CT in early detection and monitoring of COVID-19 pneumonia?
- How does interventional radiology contribute to the management of COVID-19-related complications?
- Can there be specific examples or case studies illustrating the use of image-guided treatments for COVID-19 patients?
- Are the search methods and databases used for literature retrieval clearly described?
- Can there be more details on the inclusion criteria for selecting relevant studies on the use of imaging techniques and interventional radiology in COVID-19?
- Are the key findings from the literature review presented concisely and logically?
- Can there be further discussion on the implications of these findings for clinical practice and future research in COVID-19 management?
- Does the conclusion effectively summarize the main findings regarding the role of imaging techniques and interventional radiology in COVID-19?
- Can there be recommendations for healthcare practitioners or policymakers based on the insights gained from the review?
